Education

State University of New York at Buffalo (UB): 3.8/4.0 — Buffalo, NY
Bachelor of Arts in Computer Science, Minor in Mathematics — *Jan. 2023 – May 2026*

Technical Skills

Languages: Java, Python, C/C++, SQL, JavaScript (TypeScript), HTML/CSS
Backend & APIs: FastAPI, Flask, RESTful APIs, WebSockets, OAuth 2.0, FFmpeg
Databases: PostgreSQL, PostGIS, MySQL, MongoDB
Infrastructure & DevOps: Docker, AWS (EC2), Nginx, CI/CD (GitHub Actions), Linux
AI & Data: OpenAI API, LLM Integration, Prompt Engineering, Structured Output Parsing
Concepts: Distributed Systems, Data Structures, Algorithms, Concurrent Systems, Networking

Projects

Customer Atlas | *React, PostgreSQL/PostGIS, Supabase, Docker, OpenAI API, Git* — Sept 2025 – Dec 2025

- Built AI-integrated geospatial CRM platform for customer segmentation and regional analytics
- Developed LLM-powered analytics module using OpenAI API to generate automated market insights from structured CRM data
- Implemented prompt engineering and response parsing to produce consistent, actionable outputs
- Designed AI-driven email generation system with user-defined prompts, dynamic personalization, and human-in-the-loop approval workflows
- Embedded LLM outputs into CRM dashboards to support data-driven decision-making
- Optimized PostGIS indexing and spatial queries, reducing latency by 40%
- Containerized services with Docker and configured CI/CD pipelines for reproducible deployments

HomeMate | *React, PHP, MySQL* — Sept 2025 – Present

- Managed agile workflows including sprint planning and backlog prioritization
- Coordinated agile sprints, feature prioritization, weekly stand-ups, and cross-functional collaboration (front-end, backend, deployment) across testing and production servers
- Integrated core features like user authentication, listing management, and database-backed housing posts

Full-Stack Social Platform Backend | *Python, MongoDB, Docker* — Sept 2025 – Present

- Deployed backend services on AWS EC2 using Docker and configured reverse proxy with Nginx
- Implemented low-level HTTP server architecture, defining Router, Request, and Response abstractions
- Designed and implemented 12+ RESTful APIs supporting chat, search, media upload, and authentication, handling concurrent WebSocket connections for real-time updates
- Implemented WebSocket-based real-time messaging system supporting concurrent user sessions
- Integrated OAuth 2.0 authentication for secure login and session management
- Processed and transcoded media using FFmpeg for optimized upload and playback

Experience

Undergraduate Teaching Assistant / Lead Tutor — January 2024 – Present
SUNY University at Buffalo — *Buffalo, NY*

- Led technical recitations and office hours for 100+ students, focusing on Java, OOP, web development, and backend architecture concepts
- Mentored students in debugging, software design, and efficient problem-solving strategies, improving their coding skills and understanding of core concepts
- Coordinated and managed agile workflows for student projects, facilitating sprint planning, task allocation, and progress reviews
- Conducted code reviews, provided technical feedback, and supported students in developing production-level code using Python, MongoDB, and web technologies

Undergraduate Researcher — May 2024 - November 2024
SUNY University at Buffalo — *Buffalo, NY*

- Khadela, D. (co-contributor), et al. (2024). WiSenseHub: Architecture to deploy a building-scale WiFi-sensing system. In Proceedings of ACM MobiCom '24. Link
- Integrated IMU, GPS, and Wi-Fi data into a SLAM pipeline using ROS to enable real-time localization
- Streamed and synchronized sensor data via WebSockets for motion tracking and navigation analysis
- Collaborated with graduate researchers on building-scale WiFi sensing systems
